

SIDDHARTH

Kanpur, India — siddharthgautam0000.com — LinkedIn — GitHub

Summary

Aspiring Information Technology Engineer pursuing B.Tech with hands-on experience in Machine Learning, Generative AI, Computer Vision, and Backend Development. Skilled in building AI-powered applications using Python, FastAPI, LangChain, and LangGraph. Passionate about developing intelligent systems and solving real-world problems through AI.

Technical Skills

Programming Languages: Python, C/C++, Javascript

Libraries: PyTorch, TensorFlow, Hugging, Scikit-learn, OpenCV, Pandas, Numpy, Matplotlib, NLP

Generative AI: FastAPI, LLMs, RAG, LangChain, LangGraph, Prompt Engineering, MCP

AI/ML: Machine Learning, Deep Learning, CNN, RNN, Transformers, GANs

Tools: GitHub, Jupyter Notebook, VS Code, Google Colab, Kaggle

Database: PostgreSQL, MongoDB

Education

Dr. Ambedkar Institute of Technology for Divyangjan

Sep 2023 – Exp. Jun 2027

Branch: Information Technology

CGPA: 7.0/10

Relevant Coursework: Machine Learning, Computer Networks, Database Management, Object-Oriented Programming, Data Structures and Algorithms

Projects

1. Analytics AI Agent

Apr 2026 – continue

Tech Stack: Python, FastAPI, SQL, Pandas, numpy, RAG, LangChain, LangGraph

Description:

- Built an AI-powered analytics platform that automates data cleaning, SQL query generation, data analysis, and dashboard creation.
- Developed multiple AI agents for data preprocessing, analytics, visualization, and forecasting.
- Integrated LLM-based natural language querying to enable users to analyze data without writing SQL.

2. AI Chatbot Assistant

Dec 2025 – Mar 2026

Tech Stack: Python, LangGraph, LangChain, Mistral API, Streamlit

Description:

- Developed an intelligent conversational AI chatbot using LangGraph and LangChain for managing conversation flow and state.
- Implemented Large Language Models (LLMs) to generate context-aware and human-like responses.
- Designed a graph-based workflow to handle user interactions and maintain conversation context.

3. Live Data Augmentation System

Jun 2025 – Sep 2025

Tech Stack: Python, OpenCV, YOLOv8, NumPy

Description:

- Developed a real-time computer vision pipeline using YOLOv8 for detecting and capturing objects from live webcam feeds.
- Implemented automated object extraction and class-wise dataset generation for persons, vehicles, and mobile phones.
- Built an image augmentation system applying flipping, rotation, brightness adjustment, blur, and Gaussian noise techniques.

4. AI-Generated Voice Detection System

Feb 2025 – May 2025

Tech Stack: Python, FastAPI, Scikit-learn, Librosa, Streamlit, Random Forest

Description:

- Developed an AI-powered voice detection system capable of distinguishing between human-generated and AI-generated speech.
- Extracted advanced audio features including MFCCs, spectral contrast, and chroma features using Librosa.
- Trained and evaluated a Random Forest classifier for voice classification and deployed it through a FastAPI backend.

Achievements

Hackathon: Participated in Smart India Hackathon and collaborated with a team to develop an innovative technology-based solution for a real-world problem statement.

chess: Maintained a 950+ rating on Chess.com, demonstrating strategic thinking, pattern recognition, and analytical problem-solving skills.
